

SENTOO PREMIUM PLUS FLEXI-FIBRE AFTERCARE ADVICE

Step-by-step guide to washing Flexi-Fibre

1. Prior to washing, remove all knots and tangles paying particular attention to the nape section.
2. Fill a hand bowl or sink with tepid water and a little **Trendco Revitalise Wash** and very gently agitate your wig or hairpiece back and forth in the water.
3. Gently rinse so there are no traces of shampoo. Gently smooth through some **Trendco Detangling Cream** to help condition the fibre.
4. Thoroughly rinse the conditioner out. For a more intense condition use **Trendco Intensive Treatment Conditioner**
5. Pat gently with a towel to remove excess water. Never rub.
6. Place on a Polyhead to dry naturally or alternatively use heated appliances (see below) on a medium heat to create volume or to change the style.
7. Spritz sparingly with **Trendco Moisture Protection**this keeps the fibre moisturized.

Heated Styling aids:

Flexi-Fibre can be blow-dried, straightened or curled for a completely flexible style. However, heat stylers must NOT exceed 140°. Always use heated appliances with a temperature gauge. If Flexi-Fibre is straightened, it becomes very stubborn and may result in permanent straightness. Using a higher temperature will result in permanent damage to the Flexi-Fibre.

Flexi-Fibre advice and top tips!

Before / after wearing, spray the fibre hair lightly with **Moisture Protection**, then gently remove any knots and tangles with the fingers.

If worn daily wash at least every 7 days.

When brushing use a brush with metal prongs- plastic brushes cause the fibre to be static.

Avoid opening ovens and standing under overhead heaters whilst wearing a fibre wig.

Please note that continual wearing of a fibre wig will result in the fibre frizzing -especially if your wig is collar length or longer, the name for this is **Friction Frizz**.

All fibre wigs need to be replaced more frequently than human hair. The expected lifespan for a short fibre wig is 4-6 months a mid length (or bob) wig is between 3-4 months and a long wig is 2-3 months; these time frames are approximate and are based on everyday wear.

Flexi-Fibre cannot be coloured or bleached.

All Flexi-Fibre wigs are hand-tied; this allows you to change the hair direction. To create this, dampen the fibre then blow-dry to the desired parting / crown.

We do not recommend you sleep in your wig, it will cut the lifespan by at least half.

The Silicon on the wig creates extra grip.

A recommended way to prevent/ease friction frizz is to steam a wig, this must be done with professional guidance only.

The 2 important rules for putting on your wig correctly are to position the wig line at the front 4 fingers width from your brow bone and to ensure the tabs on each side of the wig are evenly positioned so the wig is straight.
